

Useful codes for HTML users:

Link Tag

 (You must substitute the address you want)

Close Tag for a link:

Image Tag

(You must substitute the correct file name, and extension. You must also make sure the image is stored in the folder with the .html file or it won't work.)

Horizontal line

<hr>

with color

<hr color="#000000"> (substitute proper color code)

Fonts

 (**color is optional here**)

<center>

<bold>

Things to remember:

- You must have a word between the <a href> tag and the tag.
- You must have the image names exactly as they're stored.
- Your images must be stored with the HTML page NOT in the images folder.
- You must check the image extension to make sure you have the correct one in the tag.
- Try troubleshooting all problems before you ask me to come help you.
