P4—Science	R4—Science

In 7B/7C IB science, students engage in a holistic science course that encompasses life, earth, and physical science. This type of learning emphasizes the links between the disciplines, providing a global view of situations and issues. Science communication is a focus this year, as it supports inquiry and understanding which allows for student reflection and expression.

Lisa (Fegen) Wallis has taught middle school science in HISD for 12 years and was honored to receive the Teacher of the Year award during the 2007-2008 school year. Over the years she has created and implemented a series of successful camps at Lanier, which include “Fishcamp”, a comprehensive 6th grade orientation, as well as all levels of science camps ranging from grades 6 - 8. This experience led her to establish her own summer business (Raising the Bar) that focuses on creating and implementing many programs specifically designed for teens. She is a true advocate for the wonderfully unique (and often misunderstood) adolescent and is proud to be a part of the strong Lanier community. When she is not teaching, learning, or running her own business, Lisa’s secret ambition is to compete on Dancing with the Stars.
